

Thread Mills

Carbide Cutting Tools has led the cutting industry by offering their customers the widest range of ground-breaking accessories and cutting tools, and as such they have put together a catalog which features over 3,500 items including Ceramic, Silicon, Nitride, Cermet, PCD, and PCBN. Carbide Cutting Tools' "Thread Pro" is solid carbide thread mills and has been able to offer superior performance, while at the same time delivering cost-effective savings.

The "Thread Pro" thread mills have provided numerous advantages to the industry, and are since they are manufactured in a carbide grade designed specifically for thread milling they are suitable for use in an assortment of materials. The thread mills are coated with AlTiN, which ensures that the thread mills are edge wear resistance.

In terms of the highest quality and performance, Carbide Cutting Tools' "Thread Pro" thread mills endured an independent assessment and against eight other well-known thread mills, and "Thread Pro" finished tops in all thread form accuracy categories. Carbide Cutting Tools offers a total design and build service for all types of thread milling applications. Our revolutionary "Thread Pro" thread mills are produced making use of the very latest and most advanced CNC technology to make certain that accuracy, repeatability as well as exceptional performance is achieved at all times. In addition to their "Thread Pro" thread mills, Carbide Cutting Tools offers high performance style carbide end mills including, and roughers and variable pitch Harmonicut geometries as with the "Thread Pro" thread mills, the end mills are designed to provide optimal precision as well as enhanced performance.

Not only can customers of Carbide Cutting Tools be assured of precision engineered "Thread Pro" thread mills, but they have managed to keep their prices highly affordable. The milling machine is the workhorse of any machine shop and even though the vertical mill basically operates as a drill with the exception that the mill is fitted with durable bearings that allow it to handle side as well as end loads. Carbide Cutting Tools makes use of the very latest geometry and insert grade technology to develop cutting tools, such as "Thread Pro" thread mills that are extensively used in machine shops as well as manufacturers.

Carbide Cutting Tools' know-how and experience within the cutting industry have permitted them to become the trusted suppliers of cutting tool products and items for machine shops, such as the "Thread Pro" thread mills, as well as end mills, which have been intentionally designed to offer intense precision, repeatability, as well as outstanding performance. Please feel free to view our website, <http://www.carbidecuttingtools.com>, to view our extensive 3,500 item online catalog and to place your order for the solid "Thread Pro" thread mills, which will be shipped promptly to your location. In addition, our website will provide further information on our manufacturing process. The complete range of cutting tools, such as the thread mills have been produce with the most advanced CNC grinding technology.

About the Author

THREAD-PRO solid carbide thread mills, (864) 244-1485. Provide excellent performance while offering considerable savings; standard and specials available. . For more than 7 years we have provided quality cutting tool products to machine shops and manufacturers at drastically reduced prices.
